

DESIGNBRIK™

Foundation wraps on residential construction usually consist of exposed block above grade. Building codes and homeowner associations are starting to take measures to make residential foundation wraps more attractive. Oberfield's DesignBRIK units, combine the durability of concrete masonry with the look of brick, to make for a more attractive foundation above grade.

DesignBRIK is easily adaptable for residential masons, which requires the builder no additional subs to finish the foundation wrap. DesignBRIK is less expensive than installing a brick ledge as well as a time saver when building deadlines are quickly approaching.

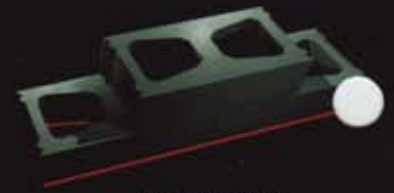

DesignBRIK is a structurally-sound single wythe concrete masonry wall or can be used as a veneer over a variety of wall systems. DesignBRIK's insulated and reinforced design meets all ASTM C-90 testing requirements. DesignBRIK is available in several shapes and sizes, including hollow-space cores, which allows for placement of grout and rebar. DesignBRIK units can also be insulated with either loose fill insulation or foamed-in-place insulation to increase R-values.

Oberfield's stocks DesignBRIK in one color, Wesleyan Blend. Special order colors are also available if your project calls for it.
